

Greening and Resilience

Central Hobart Plan

A structure plan to guide growth & development

Key elements of the draft 'Plan' have been summarised into fact sheets. Please refer to the full draft structure plan available at yoursay.hobartcity.com.au

With a changing climate existing open spaces need to be protected and the creation of new open spaces becomes even more important for our local environment. Opportunities for improved waterfront and Hobart Rivulet access, street greening and new urban green spaces are identified in the Urban Design Framework (see section 3.6 of the draft Plan).

Cities worldwide are recognising trees and green spaces as critical urban infrastructure, as they provide clean air and shade, and cool the atmosphere during periods of heat, promote biodiversity, reduce pressure on stormwater infrastructure and aid in carbon capture.

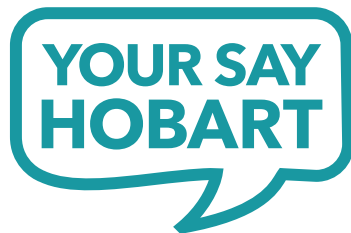

Open space and street trees in the Central Hobart area are limited. Through Hobart's Street Tree Strategy, the Council has already committed to an aspirational target of 40% tree canopy cover by 2046 in the city's urbanised streets.

New open space is needed to meet increased demand over time and contribute to urban greening, and the health and wellbeing of the city's inhabitants. The Hobart Rivulet offers a great opportunity to express the ecosystems, history and culture of the city and as an active travel movement route.

The Urban Design Framework proposes a long-term concerted effort to bring segments of the Rivulet back to the surface, in what is called 'daylight' and, in those areas where it is not appropriate to do so, represent and reinterpret its underground presence above.

Please refer to the full structure plan for more information.
